<u>,,</u>

Nucleic acids encoding 49 human secreted polypeptides, useful for preventing, diagnosing and/or treating diseases such as tumors, rheumatoid arthritis, psoriasis and diabetic retinopathy.

WPI; 2001-071280/08 P-PSDB; AAB64703.

Claim 1; Page 452; 520pp; English.

The polymucleotide sequences given in AAF33037 to AAF33085 encode the human secreted proteins given in AAB64666 to AAB64714. AAB64715 to AAB64771 represent human secreted polypeptide sequences and proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc invention. Human secreted proteins have activities based on the tissues cand cells the genes are expressed in. Examples of activities include: cytostatic; antirheumatic; antiarthritic; dermalogical; cardiant; cc antiinflammacory; gastrointestinal; and anti-ulcer. The polymuclectides can deplypeptides can be used in the prevention, treatment and diagnosis condiseases associated with inappropriate polymeptide expression. CC Disorders that may be treated or prevented include solid tumours, cc preventedis. Crohn's disease and ulcers. The polymuclectides and their complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic cc assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples, and therefore which patients may be in need of restorative therapy. The polypeptides complementary also be used as antigens in the production of antibodies and antagonists may also be used to down regulate expression cc antibodies and antagonists may also be used to down regulate expression cc antibodies and antagonists may also be used to down regulate expression cc antibodies and antagonists may also be used to down regulate expression cc antibodies and antagonists may also be used to down regulate expression cc antibodies and antagonists may also be used to down regulate expression cc in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic cuseful for the antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous antisense nucleic acid sequence encodes an essential prokaryotic cullular proliferation protein. Note: The sequence data for this patent of did not form part of the printed specification, but was obtained in

```

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression

SEQ ID NO 20432; 1766pp; English.

of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid

polypeptide whose expression is i

(2) a host cell containing the vector; (3) an isolated

inhibited by the antisense

nucleic acid; encoding a

Claim 2; Page 30-32; 39pp; English over-expressed.

The present invention relates to a process for the fermentative preparation of L-threonine. The process involves employing preparation of L-threonine. The process involves employing Enterobacteriaceae bacteria, particularly those which already produce threonine, and in which the gene which encodes for the malate:quinone oxidoreductase (mgo) enzyme (E.C.1.1.99.16) are enhanced, in particular coxidoreductase (mgo) enzyme (E.C.1.1.99.16) are enhanced. oxidoreductase (mgo) enzyme (E.C.1.1.99.16) are enhanced, in particular over-expressed. The invention employs the Enterobacteriaceae, Escherichia coli as an example. The process is useful for preparing L-threonine by fermentation. The present sequence encodes for the E. coli mgo enzyme. (Updated on 29-AUG-2003 to standardise OS field) already produce L-

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation of presponsible for genetic disorders or other traits and to assess mutations

Claim 1; SEQ ID NO 28629; 103pp; English

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain

The polynucleotides are also used ci in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc genes. (I) is useful in gene therapy techniques to restore normal cc genes. (I) is useful in gene therapy techniques to restore normal cc genes. (II) or to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a copypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging cc fites expressing (II). (I) and (II) are useful for treating disorders complying aberrant protein expression or biological activity. The cc involving aberrant protein expression or biological activity. The cc diagnostics, forensics, gene mapping, identification of mutations cc diagnostics, forensics, gene mapping, identification of mutations cc amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this cc gatent did not appear in the printed specification, but was obtained in cc lectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is cusful for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food csupplement. (II) and its binding partners are useful in medical imaging cc supplement. (II) and its binding partners are useful in medical imaging cc sites expressing (II). (I) and (II) are useful for treating disorders cc involving aberrant protein expression or biological activity. The cc plypeptide and polymucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cc amino acid sequences of that and products dependent on DNA and camino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this cc patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at cc ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
```

The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a

gene expression

                                                                                                The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence dat for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                         The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.

                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a spatially-addressable set of single exon CC nucleic acid probes for measuring gene expression in a sample derived CC from human breast and BT 474 cells. The method involves contacting the CC probes with a collection of detectably labelled nucleic acids derived CC from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the CC expression of regions of genomic DNA predicted to encode proteins. They CC are useful for gene discovery, and for determining predisposition and/or CC prognosing breast disease. Gene expression analysis is useful for cc assessing the toxicity of chemical agents on cells. The microarray of CC this invention presents a far greater diversity of probes for measuring CC microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon cucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained con electronic format directly from MIPO at

The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

        The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (1) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the
                                                                                                                                                   Claim

                                                                        The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form at the printed specification, but was obtained in electronic format different with a part of the presence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from W
                                                                                                                                                                                                                                                                                      Novel single exon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         문
CC nucleic acid probes for measuring gene expression in a sample derived (from human lung comprising single exon nucleic acid probes having one of (22614 nucleic acid sequences mentioned in the specification, or their (22614) complements or the 1287 open reading frames derived from the 12814 (226) probes. Also included are a microarray comprising the novel set of probes (226) the novel set of probes which hybridise at high stringency to a nucleic (226) caid expressed in the human lung; measuring gene expression in a sample (226) caid expressed in the human lung; measuring gene expression in a sample (236) contaction of detectably labeled nucleic acids derived from human lung; comprising (a) contacting the array with a (236) contacting the array with a contacting the array with a contacting the bound to each probe of the (236) contacting the contacting the array with a conta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; ds; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; cuberous scierosis; Gaucher's disease; Niemann-Pick disease; tuberous scierosis; Gaucher's arcoidosis; pulmonary haemosiderosis; pulmonary histocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary dyskinesis; pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histicoytosis, lymphangiolelomycmtosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a single exon probe of the invention. Note: The sequence data for this pateent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (CODD), interstitial lung disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ACC61225 standard; DNA; 2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one

밁 Ş

The invention relates to multiprotein complexes from eukaryotes. Protein of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of protein

proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete
                                                  useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament
                                                                                                                                                                                                                                                                                                                                        The invention relates to novel protein complexes comprising a first second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defin the specification. The variants are encoded by nucleic acids that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New proteins and protein complexes from eukaryotes, useful as targets drug screening, or in diagnosing or screening for the presence of a disease or disorder, or a predisposition for developing a disease or
                                                                                                                                                                                                                                                     hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disorder in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-DEC-2001; 2001EP-00130253

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
            CC The invention relates to isolated polymucleotide (I) and polypeptide (II) CC sequences; (I) is useful as hybridisation probes, polymerase chain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polymucleotides are also used CI in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal CC useful for generating antibodies against it, detecting or quantitating a CC useful for generating antibodies against it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The CC polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this catent did not appear in the printed specification, but was obtained in CC electronic format directly from MIPO at the content of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       patent did not form part of the printed specification but was obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity.

The binding proteins PSD-93 and -95 also have a PDZ domain and interact with nNOS, mediating binding of nNOS to the NMDA receptor located at synapses. The PSD proteins are involved in the development and progression of stroke and some neurodegenerative diseases (e.g. Huntington's and Alzheimer's diseases and amyotropic lateral sclerosis), so inhibiting them (or their binding) can be used to treat etc. such diseases (associated with overactivation of NMDA receptors by excessive levels of nNOS. This method allows early diagnosis of MD. MD can now be treated by gene therapy, using only the fragment of dystrophin involved in formation of the nNOS/sarcolemma/dystrophin complex, rather than the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        93 can be used in the method of the invention, for diagnosing muscular dystrophy (MD) in a mammal by detecting absence a decrease of neuron nitric oxide synthase (nNOS) in a skeletal muscle sample. Patients with Duchenne or Becker MD lack normal levels of nNOS in skeletal muscle, in addition to lack of functional dystrophin, nNOS is normally targeted to
New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

밁 8

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain

The present invention relates to Aspergillus fumigatus genes that are essential and are potential targets for drug screening. The methods and compositions of the present invention are useful for diagnosing and/or treating invasive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be

New purified or isolated Aspergillus fumigatus nucleic acid molecule encoding a gene product, useful for diagnosing and/or treating invasifungal infections, such as Farmer's lung disease.

and/or treating invasive

Claim 3; SEQ ID NO 543; 164pp; English.

The present sequence represents an Aspergillus fundgatus essential gene full length genomic sequence, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format from WIPO.
                                                                                                                                                                                                                                                                                                       AAX20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnost characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrelia infections in animals, and for the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis.

                                                                                                                         ঠ
                                                                                                                                                                       with a composition comprising the polypeptide or its antigen binding care fragment and collecting cells from the host expressing antibodies against the antigen antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of dagnosing cancer, a composition comprising cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents murine cancer—associated genomic DNA of the invention.

                                                                                                                                strain
                                                                                                                                and
```

The invention relates to an isolated or purified nucleotide sequences (I) from Legionella pneumophila Paris strain. (I), and their related sequences or fragments are useful as primers and probes for detection and amplification, including differentiation between the Paris and Philadelphia strains of Legionella pneumophila and to prepare recombinant (hybrid) polypeptides (II) (II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L. pneumophila. The present squence represents a L. pneumophila DNA.

New genome of Legionella pneumophila Paris strain and polypeptides, useful for detection or identification of treatment and prevention of infections. derived of the strain

Example 9; SEQ ID NO 3502; 660pp; English

The invention relates to an isolated or purified nucleotide sequences from Legionella pneumophila Paris strain. (I), and their related sequences or fragments, are useful as primers and probes for detection sequences primers Ê

The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for disgnosing and treating autoimmune diseases, such as: rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory beautiful actions and protein account of the invention of the contact of the invention are useful for disposing and treating autoimmune diseases, such as: rheumatoid arthritis, type 1

pernicious

                                       The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for disgnosing and treating autoimmune disease, such as: rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel disease, psoriasis, throiditis, celiac disease, permicious anaemia, asthma, vitiligo, glomerulonephritis, Grave's disease, myocarditis, Sjogren's disease, or primary systemic vasculitis. The myocarditis, Sjogren's disease, or primary systemic vasculitis.

                                                                                                                                                         used to clone a fragment of the human OGFr cDNA. The complete sequence of human OGFr was assembled with a combination of 3' and 5' RACE. 5' RACE consistently yielded a single species of cDNA, while the 3' RACE revealed extensive alternative splicing. The alternate splice forms were missing the imperfect repeats or differed in the number of imperfect repeats. The human OGFr gene chromosomal location was determined by FISH as 20(13). expression vector are useful for detecting expression or levels of an OGFr in a tissue. OGFr nucleic acids can be used to inhibit growth of cells in vitro. The antisense sequences and antibodies can be used to promote growth of cells in vitro. Cell growth can be promoted by interfering with the OGF ligand-receptor system, especially where a subject suffers from a tissue wound. Treating cancer comprises enhancing the function of the OGF ligand-receptor system in cancerous cells of a patient or administering the OGFr nucleic acid to the patient

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                         The invention comprises amino acid and coding sequences containing comprises polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA compressing and protein sequences of the invention are useful for diagnosing and treating autoimmune diseases, such as: rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory compositions as the protein sequence of the inventions of the invention of the invention of the invention of the present sequence is not genomic DNA sequence of the invention. NOTE: The present sequence is not shown in the specification, but has been retrieved from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   single nucleotide polymorphism detection; SNP detection; rheumatoid arthritis; type 1 diabetes; multiple sclerosis; systemic lupus erythematosus; inflammatory bowel disease; psoriasis; thyroiditis; ceilac disease; pernicious anaemia; asthma; vitiligo; glomerulonephritis; Grave's disease; myocarditis; Sjogren's disease;
Sequence 29871 BP;
                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid molecule comprises at least 8 contiguon nucleotides where one of the nucleotides is a single nucleotide polymorphism (SNP), useful for diagnosing or treating autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                              Cargill M,
